

Deconvolving ETM Tropical Ocean Deoxygenation

Deconvolving Drivers of Tropical Ocean Deoxygenation Across the Eocene Thermal Maximum: A ...

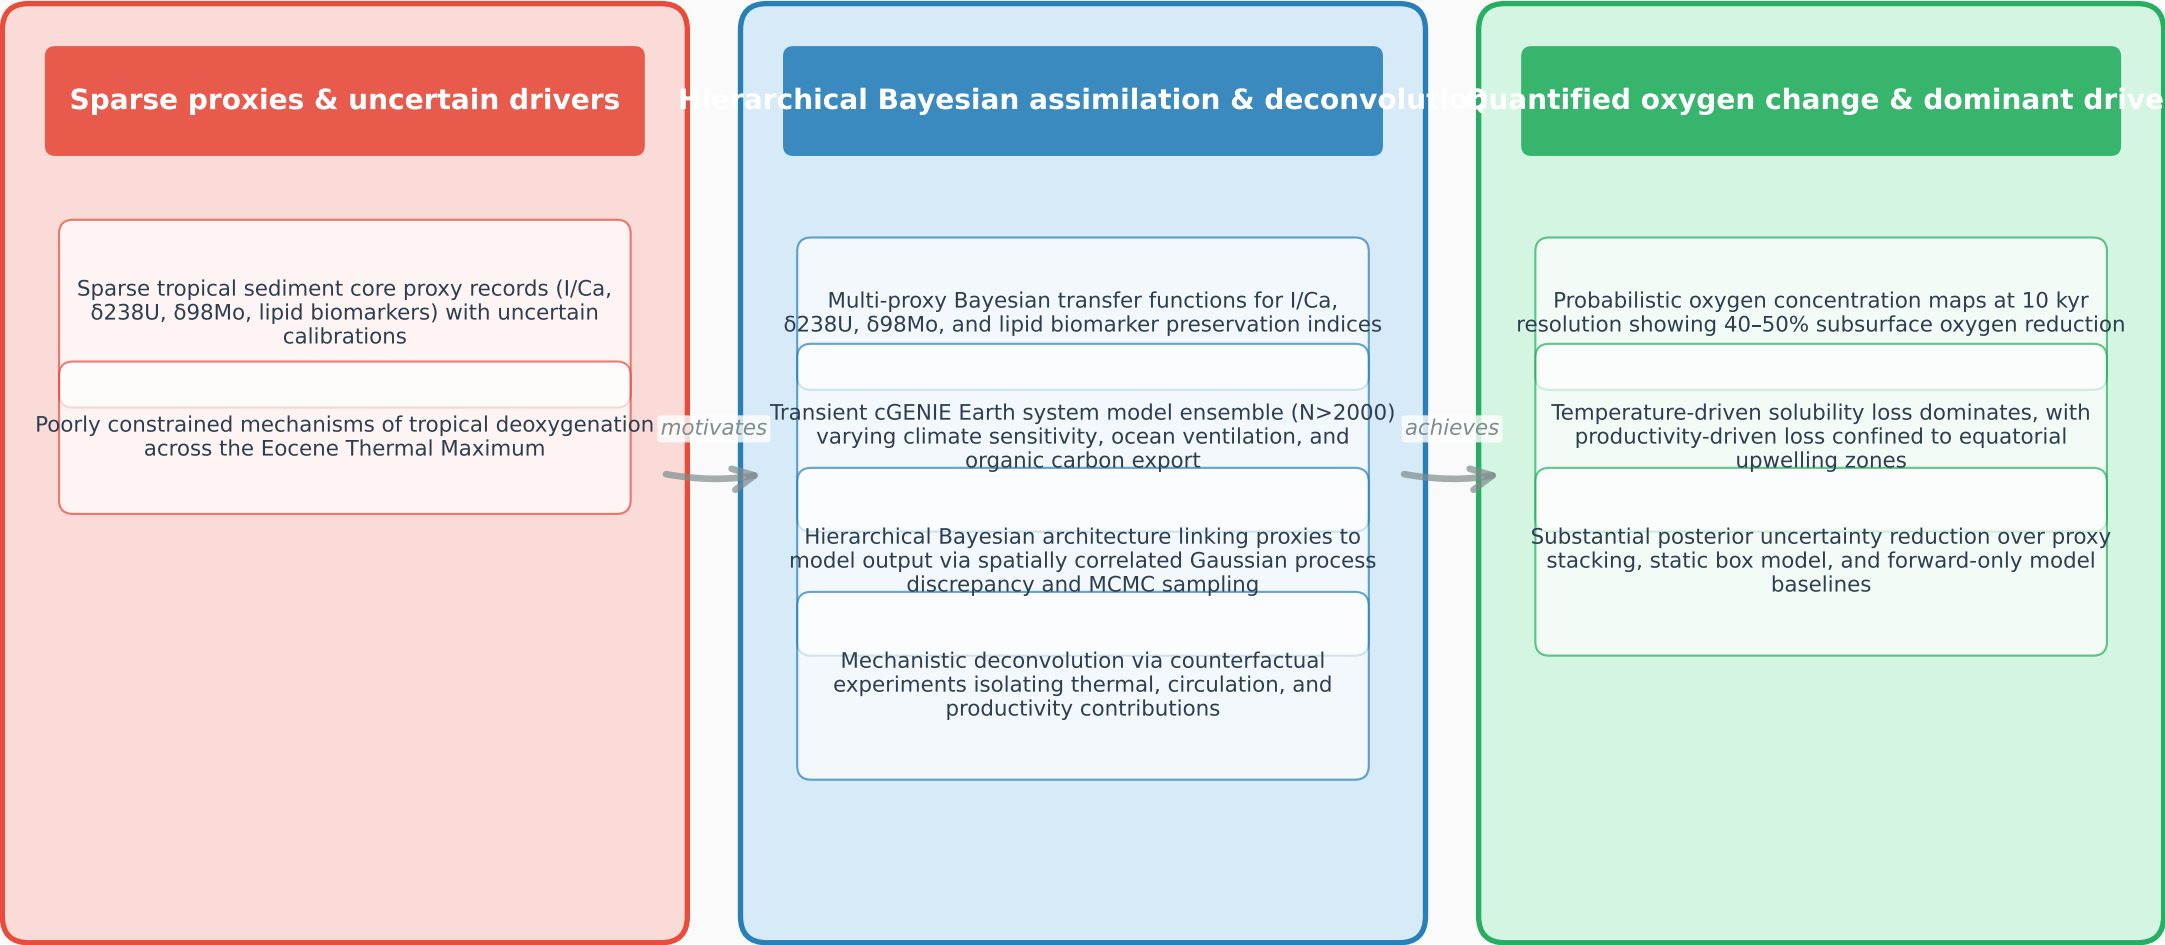

Figure 1: Overview of the hierarchical Bayesian assimilation of multi-proxy data (I/Ca, $\delta^{238}\text{U}$, $\delta^{98}\text{Mo}$, lipid biomarkers) into the cGENIE Earth system model, which deconvolved drivers of tropical deoxygenation during the Eocene Thermal Maximum, revealing temperature-driven solubility loss as the dominant mechanism.
